

Senior iOS Engineer - Projects Portfolio

12+ years of production iOS development across social, fintech, geolocation, and real-time domains. The projects below represent a cross-section of commercially shipped work and are listed in reverse chronological order.

Likepost - Senior iOS Developer

App Store Link: <https://apps.apple.com/ua/app/likepost/id6744123389>

Greenfield social media platform focused on media-heavy user interactions and scalable real-time content delivery.

Feb 2025 - Jan 2026

KEY CONTRIBUTIONS

- Developed and scaled a greenfield social media iOS application from scratch using SwiftUI, MVVM-C, and Clean Architecture
- Built a high-performance SwiftUI feed with infinite scrolling and pagination, maintaining smooth rendering under heavy media and interaction load
- Designed and implemented an offline-first synchronization layer using Core Data, enabling reliable offline access and resilient background synchronization
- Optimized rendering and caching pipelines for photo galleries containing 30k+ media assets, significantly reducing memory pressure and improving scrolling stability
- Improved asynchronous rendering and background data-processing flows, reducing frame drops and maintaining stable 60 FPS performance across content-heavy screens
- Integrated GraphQL APIs for data-intensive screens, optimizing query structures and reducing unnecessary network payload overhead
- Collaborated on Kotlin Multiplatform shared modules to reuse business logic across iOS and Android platforms
- Partnered with backend engineers on scalable social interaction and push notification flows
- Participated in architectural discussions and technical planning for performance-critical product areas
- Mentored junior and mid-level iOS engineers through code reviews, technical guidance, and architecture discussions

TECH STACK **Swift, SwiftUI, UIKit, MVVM-C, Clean Architecture, Core Data, GraphQL, Swift Concurrency, Kotlin Multiplatform, AVFoundation, MediaPlayer**

Enterprise Multi-Merchant Commerce Platform - Senior iOS Developer [NDA]

Large-scale multi-merchant commerce platform supporting merchant operations, POS workflows, and catalog management.

Mar 2020 - Aug 2024

KEY CONTRIBUTIONS

- Owned iOS development of a large-scale multi-merchant e-commerce platform for 4+ years, driving architecture decisions, feature delivery, and long-term platform evolution
- Designed and maintained a modular architecture using SPM, improving code isolation, simplifying feature development, and reducing maintenance overhead
- Built and optimized complex flows for catalog management, payments, POS integrations, and merchant operations, improving merchant workflows and reducing operational friction
- Engineered a dynamic dependent filtering system for large product catalogs, improving product discovery and reducing navigation friction
- Integrated Stripe Terminal SDK to support secure in-store payments through POS hardware devices and card-present payment flows
- Implemented Role-Based Access Control (RBAC) with Local Authentication (Face ID / Touch ID), supporting multiple merchant permission levels and strengthening application security
- Optimized asynchronous rendering and data-loading pipelines using Swift Concurrency, eliminating scroll stuttering on catalog screens with 10k+ items

- Reduced API-driven screen loading latency by 40–60% through caching, request optimization, and background data processing

TECH STACK [Swift, UIKit, GCD, SPM, Stripe Terminal SDK, Core Data, LocalAuthentication, REST APIs](#)

Safe Esteem - iOS Engineer

<https://www.safe-esteem.com>

Personal safety app using real-time location and motion data to detect risk events and alert trusted contacts.

Dec 2019 - Sep 2021

KEY CONTRIBUTIONS

- Contributed to the architecture and core development of a safety-focused iOS application using MVC-R and a custom Router-based navigation system.
- Architected and implemented real-time location and motion tracking workflows using Core Location and Core Motion for automated safety risk evaluation.
- Built MapKit-based monitoring interfaces with custom annotations, geofencing, and live location status visualization.
- Designed an offline-first Core Data synchronization layer with background context handling to support reliable operation during connectivity loss.
- Optimized background processing pipelines for location and motion updates to improve responsiveness with focus on battery efficiency during extended tracking sessions.
- Collaborated directly with stakeholders and backend teams to translate complex safety requirements into scalable mobile solutions.
- Participated in architectural planning and technical decision-making for reliability-critical features, mentoring junior and mid-level developers.

TECH STACK [Swift, UIKit Core Location, Core Motion, Core Animation, MapKit, Core Data, RESTful API](#)

Rates.in.ua - iOS Engineer

[App Store Link](#)

Ukrainian currency exchange rate tracker with home-screen widgets and offline caching.

Feb 2018 - Mar 2022

KEY CONTRIBUTIONS

- Built and maintained a SwiftUI-based widget system using MVVM, delivering exchange rate updates directly on the iOS home screen
- Contributed to the implementation of StoreKit and In-App Purchase flows for premium features and subscription-based monetization
- Implemented offline data persistence with Core Data, ensuring exchange rates remained available during unstable network conditions
- Improved app responsiveness by optimizing caching mechanisms and background synchronization flows
- Collaborated on architectural and feature decisions to support new fintech functionality and ongoing product scalability

TECH STACK [Swift, UIKit Swift UI, Core Data, In-app purchases, Widgets](#)

BRIJ

Real-time social messaging app with rich media sharing and in-app subscription monetisation.

Jun 2019 - Feb 2020

KEY CONTRIBUTIONS

- Designed scalable navigation flows using MVC + Coordinator architecture, supporting rapid feature expansion across a complex messaging product
- Built and maintained socket-driven real-time communication layer enabling reliable low-latency messaging experiences
- Optimized rendering pipelines for media-heavy chat feeds, reducing UI lag and improving scroll performance under high-content loads

- Enhanced application stability and memory efficiency through optimized image loading, caching, and reusable view components
- Partnered cross-functionally with backend engineers and product stakeholders to deliver performant real-time social features at scale

TECH STACK [Swift](#), [Core Data](#), [In-app purchases](#), [Sockets](#), [AVFoundation](#), [MediaPlayer](#)

Early Projects (2013 - 2018)

Formative years covering diverse application categories.

2013 - 2018

KEY CONTRIBUTIONS

- Delivered end-to-end iOS features across healthcare, social networking, and content-reader applications during early-stage mobile product development
- Gained deep experience in native iOS foundations including local persistence, geolocation, Bluetooth communication, real-time messaging, and custom rendering systems
- Implemented scalable mobile integrations with payment systems, mapping platforms, HealthKit, and RESTful backend services
- Built performant offline-capable mobile experiences using SQLite-backed architectures and optimized synchronization flows
- Contributed to complex UX-driven functionality including cycle prediction, proximity-based networking, fitness tracking, and custom EPUB rendering/annotation systems

TECH STACK [Objective C](#), [UIKit](#), [Swift](#), [SQLite](#), [MediaPlayer](#), [Google Maps SDK](#), [Braintree](#), [HealthKit](#), [RESTful API](#), [MQTT](#)
